# EVOLVE Series

The taut lines of Evolve's design look at the future, when formal cleanliness is combined with the technical consistency of a product intended to guarantee unchanging performances over time. Minimal design, a statement of precise choice, in which soft contours and sharp edges harmoniously blend in, one with the other, to be pleasantly combined with modern and classical furnishings, yet without giving in to affected temptations.

# EVOLVE Series

## COLOUR INSIDE, COLOR OUTSIDE

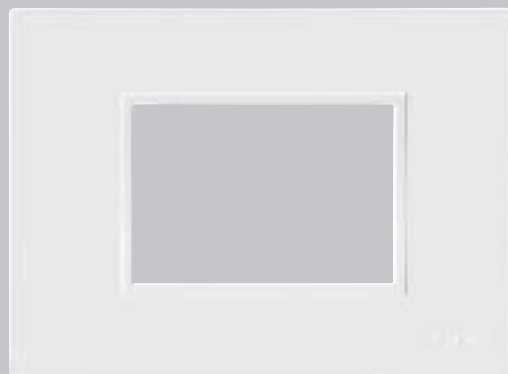

Linear design becomes even more appealing thanks to the chromatic component of the surfaces. In addition to six original colours and five special finishes for the frontplates available in two

different designs, Evolve also offers five colours for the modules, in order to create sober or colourful combinations, so as to satisfy the widest variety of tastes and aspirations without ever clashing.

## FRONTPLATES

## WIDE FRONTPLATES

Architects and design engineers, as well as anyone who knows the importance of detail, never pass up a chance to enrich their interior design offer with a touch of unquestionable originality.

## EVOLVING THROUGH ADAPTATION

The Evolve series features a wide range of control devices: single-pole or double-pole switches, two-way switches, intermediate switches and pushbuttons.

All control devices come with both single-module and double-module configurations, with or without the indicator light.

The socket range is also vast, with sockets designed in compliance with the reference standards, when foreseen. In addition to the

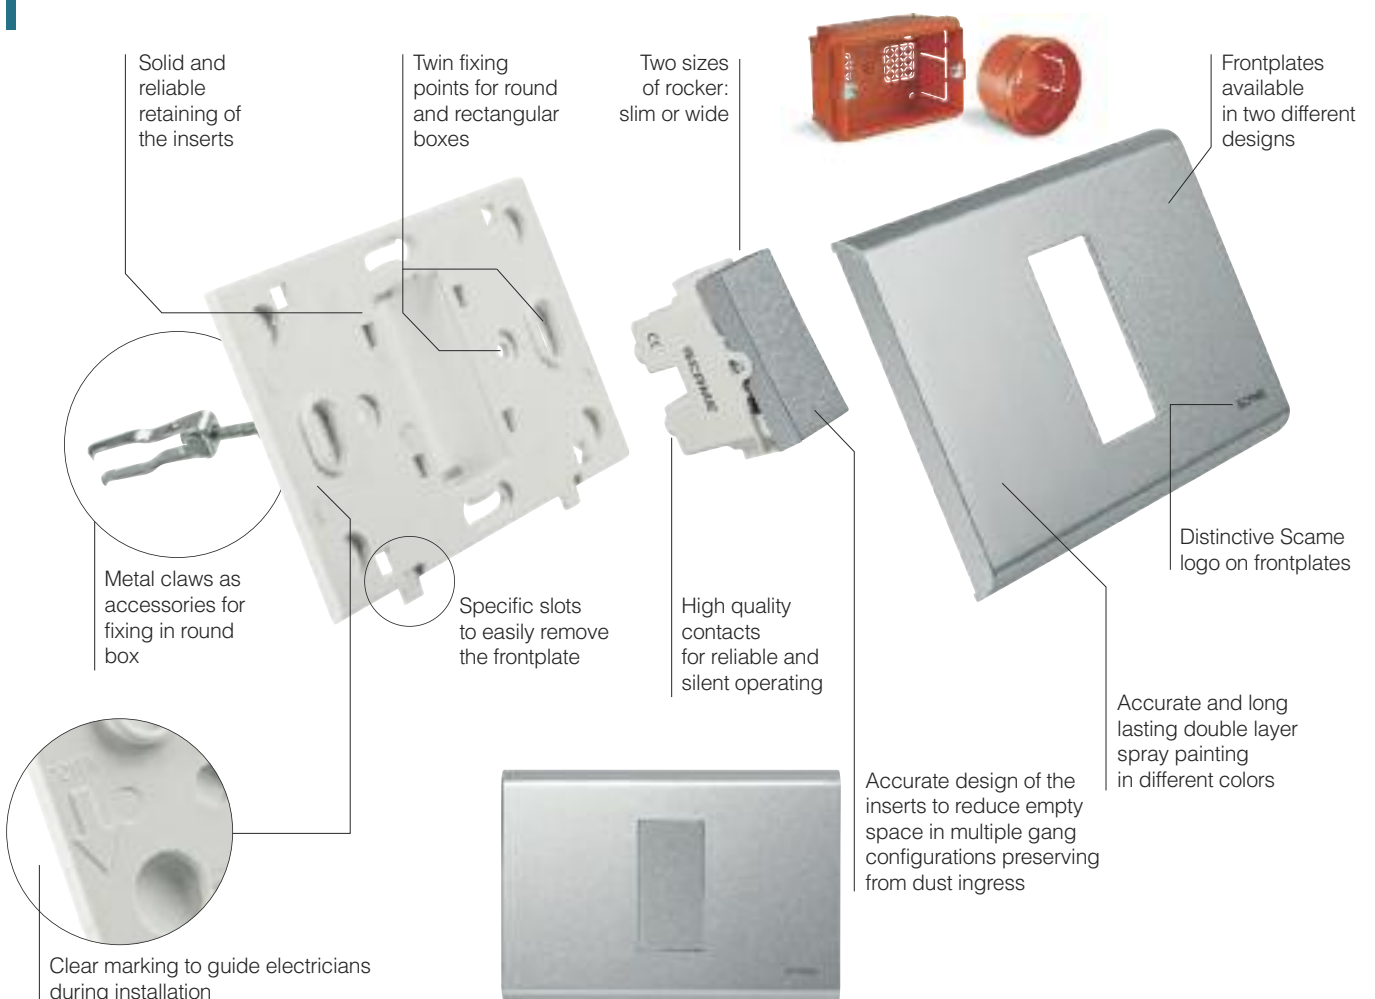

10/16A Italian standard and the 16A German and 16A French standards, the handy Euro-American and international standard sockets are also available.

The TUV certification that covers most of the range is further proof of the quality of a product whose prerogative is not only beauty.

Five frame sizes, for configurations with up to six compartments, that can be accessorized using products for the most part TUV-certified and in compliance with the relevant Reference Standards. The frame, bearing clear instructions for proper installation, features a honeycomb structure and handy

slots for optimal fixing to the box. Italian standard rectangular flush box and 60 mm diameter round box: both can be used to fit the new Evolve, guaranteeing safe and reliable installations in new buildings and renovated ones.
