

TO ALL OUR CUSTOMERS

NEW 1. **SWITCHES: DRIVE EXTENSIONS FOR DOOR INTERLOCK**

The SCAME product line has been extended regarding door interlock drive extensions.

In addition to the 185mm and 300mm versions already present in the catalogue, now new 85mm versions have been added that, like the present versions, will be available for Type "B" (Box) switches with dimensions 5x5mm for 16A, 32A and 40A modules, and dimensions 6x6mm for 63A and 80A modules.

The following new catalogue numbers have thus been created:

DRIVE EXTENSION FOR DOOR INTERLOCK

DESCRIPTION	FOR SWITCHES	LENGTH	DIMENSIONS	PACKAGE BULK PACK	CATALOGUE NUMBER
For Box modules	16A - 32A - 40A	85mm	5x5mm	10	590.YMA085
	63A - 80A	85mm	6x6mm	10	590.YMB085

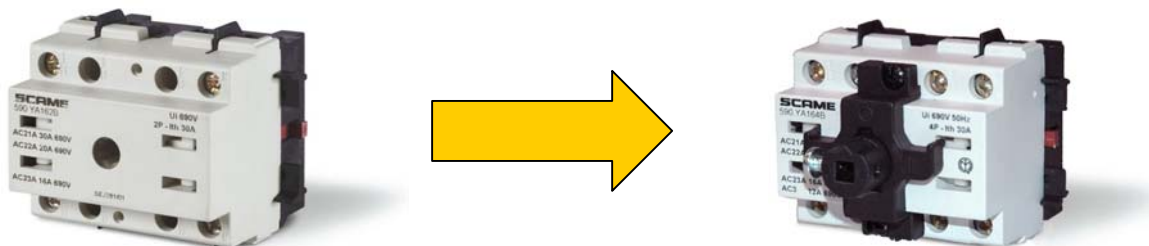

NEW 2. **SWITCHES: SWITCH DISCONNECTORS MANAGEMENT**

Management of the switch disconnectors has been modified along with the relative front switching panels. The switches will be supplied complete with brackets, bushings and relative screws (and, for Type "R" modules, the shaft), while the front controls will be supplied without the components already assembled on the switch and without drives extension. Thus for the Type "B" modules, in order to complete the purchase, the customer will have to purchase the drive extension separately (previously the 85mm drive extension was supplied as standard).

Essentially:

- For Type "B" modules the drive extension has been taken out from the front control so that the customer can select the drive extension with the most suitable length for the particular application;
- For Type "B" and Type "R" modules, brackets, bushings and relative screws (and the shaft for Type "R" modules), that were previously supplied with the front control, are now supplied already assembled on the switch.

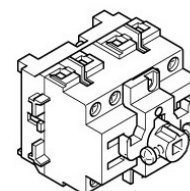

Example of switch disconnecter 16A - 32A – 40A Type “B” module

Attention: the catalogue numbers remain unchanged.

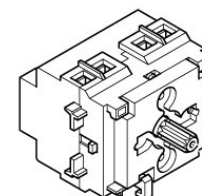

Products concerned by the change:

3. EVOLUTION SERIES PLATES: COLOURS

The **Exclusive** series of the Bombèe and Classic lines has been divided into two subgroups:

- **Nature** (veneer and wood)
- **Tech** (metal)

Thus a remarkably enhanced range of plates is now available to those looking for exclusive units with innovative elements.

The common starting point of all the new versions is the engineering polymer with which they are made, but they differ in terms of the subsequent working process:

- .XCS for chrome plating (metal layer deposit)
- .XNL for nickel plating (metal layer deposit) and subsequent surface brushing
- .XNO for nickel plating, brushing and final transparent painting.
- .XCB; .XFR; XGS are produced by cubicature (deposit of water-soluble film plus painting)
- .XNS is produced by painting

The working process which the first three codes undergo provides the finished product with excellent structural qualities similar to those of metal plates.

The **Bright** series of the Classic and Bombèe lines has been divided into two subgroups:

- **Elegance** (current colours .AT; .AV; .B; .N)
- **Smile** (current colours .AZ; .BL; .GL; .R)

The Smile series is expanded with four new pastel shades **.AC; .VA; .GS; .RS**

All the plates are made of engineering polymer.

The Smile series, characterized by bright colours and new pastel shades, is particularly indicated for realizations such as preschools or schools which, in addition to an attractive final appearance, also require greater cost effectiveness.
